

Fam Manager

Shreepaada M C

Project overview

The product:

Fam Manager is a family management mobile application designed to help users securely store important family documents, manage schedules, and organize family-related information in one centralized platform. The app focuses on simplifying everyday family coordination through an easy-to-use and accessible interface.

Project duration:

April 2026 - May 2026

Fam Manager

Too many documents?
We'll keep them sorted
for you.

Your schedule
getting crowded?
We'll sort the
chaos for you.

Project overview

The problem:

Many users struggle with keeping family documents and schedules organized, often relying on scattered physical files or multiple apps. This creates difficulty in accessing important information quickly and managing daily family activities efficiently.

The goal:

The goal of this project was to design a simple and user-friendly family management application that helps users organize important documents, manage schedules, and access family-related information efficiently in one place.

Project overview

My role:

UX/UI Designer

Responsibilities:

Conducted user research, identified user pain points, created user flows and wireframes, designed low-fidelity prototypes, developed high-fidelity UI Mockups and Prototypes, and performed usability testing to improve the overall user experience.

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

I conducted user testing with five of my friends using the high-fidelity prototype of Fam Manager. The testing revealed that users initially faced navigation issues, especially after uploading documents, as they were redirected back to the main documents page instead of the specific category they uploaded to. Users also suggested better document organization through separate sections for each family member and highlighted the need for privacy controls so that certain schedules and documents are visible only to parents. However, the schedule management feature was well received, and users felt that it effectively met their everyday planning and tracking needs.

User research: pain points

1

Navigation

Users found the navigation confusing after uploading documents, which showed the need for clearer user flows and better redirection.

2

Better Organization

Documents inside categories felt cluttered, highlighting the importance of better organization and member-based sections.

3

Role Based Access

Users wanted privacy controls for sensitive schedules and documents, leading to the idea of role-based access for parents and children.

4

Schedule Feature

The schedule feature received positive feedback, reinforcing the importance of keeping the scheduling experience simple and easy to access.

Persona: **Person 1**

Problem statement:

Person 1 is a busy software engineer who needs a simple way to organize family documents and manage schedules because keeping information scattered across different places makes it difficult to access and manage efficiently.

Person 1

Age: 23
Education: Engineer B.Tech
Hometown: Bengaluru
Family: 4 Members
Occupation: Software Engineer

"I want everything related to my family organized in one place without making it complicated"

Goals

- Easily store and access important family documents
- Manage schedules and family events in one place

Frustrations

- Difficulty finding documents quickly

Person 1 manages both work and family responsibilities and often struggles to keep track of important documents and schedules. They need a centralized and easy-to-use platform that helps save time and reduces confusion in daily family management.

User journey map

To help users manage family documents and schedules easily in one organized and accessible platform.

Persona: Person1

To help users manage family documents and schedules easily in one organized Platform

ACTION	Adding a Event	Adding document	View Document	View Event
TASK LIST	Tasks A. open app B. enter the events page click on the plus /compose button set up the date and time in callander and set the name of the event C. exit the app	Tasks A. open app B. enter the documents section click on plus/compose button upload the important document under desired section C.exit app	Tasks A. enter documents page B. select the category of document you want to view C.view the files	Tasks A. enter Events page B. by default the current day will be selected if any events are available they will be shown C.select the date you want to view
FEELING ADJECTIVE	User emotions The user wants set up an event without a hassle in the calendar app	User emotions The user wants a clear upload and access imp documents when in need	User emotions The user feels that having separate document sections for each member would be easier	User emotions The user wants to view the schedule To know the upcoming events

Paper wireframes

The paper wireframes were created to quickly explore the layout and navigation flow of the Fam Manager app before moving into digital designs. The focus was on organizing key features like documents, schedules

Digital wireframes

Helps users
organize and
find important
files quickly.

Allows users to
easily view
upcoming
events and
schedules from
the homepage.

Digital wireframes

Helps users quickly add and manage important family events in one place.

The wireframe illustrates a mobile application interface for managing family events. At the top, a header bar contains a hamburger menu icon, the text 'Fam Manager', and a user profile icon. Below the header is a search bar with a magnifying glass icon and the placeholder text 'Search using file name'. A section titled 'Add new Event' is followed by a 'Select Date' dialog. This dialog features dropdown menus for 'Month' and 'Day', a calendar grid with days of the week (sun, mon, tue, wed, thur, fri, sat), and 'Cancel' and 'Confirm' buttons. Below the date selector is a section titled 'Up coming Events'. This section contains a scrollable area with a 'Date' label, a 'Day' label, and a preview of dates and events with a background of today and any events or schedules. Navigation arrows (left and right) are present on the sides of the scrollable area, and three dots at the bottom indicate a carousel. At the very bottom of the screen are two large circular buttons: a back arrow and a plus sign.

Allows users to easily track upcoming schedules and important dates without extra navigation.

Low-fidelity prototype

I created a low-fidelity prototype to map the main user flow of the Fam Manager app, including document management, event scheduling, and navigation between screens. This helped me test the overall structure and identify usability issues early before moving into high-fidelity designs.

Usability study: findings

I conducted usability testing with five users using the high-fidelity prototype to understand how easily they could navigate the app and complete common tasks. The study helped identify navigation issues, document organization problems, and areas where the user experience could be improved, while also highlighting features that worked well for users.

Round 1 findings

- 1 Users found document navigation confusing after uploads.
- 2 Users wanted better document organization for family members.
- 3 Users disliked the schedule management feature

Round 2 findings

- 1 Navigation improvements made document access easier.
- 2 Users liked the schedule management feature.

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

Mockups

The mockups show that the previous design where the preview of each event was not as accessible so i changed the design to to show all the events as per the selected day

Before usability study

The 'Before usability study' mockup shows a 'Fam Manager' app interface. At the top is a header with a hamburger menu, the text 'Fam Manager', and a user profile icon. Below the header is a search bar with the placeholder text 'Search using file name'. Underneath is a section titled 'Add new Event' which contains a 'Select Date' dialog. This dialog has dropdowns for 'Month' and 'Day', a grid of days from 'sun' to 'sat', and 'Cancel' and 'Confirm' buttons. Below this is a section titled 'Up coming Events' which contains a preview of dates and events with a background of today and any events or schedules if there are any. At the bottom are navigation icons for back and home.

After usability study

The 'After usability study' mockup shows a 'Fam Manager' app interface. At the top is a header with a back arrow, the text 'Fam Manager', a user profile icon, and another back arrow. Below the header is a search bar. Underneath is a section titled 'Information of the Event' which contains input fields for 'Event name*', 'Start Time' (with a calendar icon), 'End Time' (with a calendar icon), and 'Enter Year*'. Below this is a section titled 'September October November' which contains a calendar view. The calendar view shows the months of September, October, and November. The calendar view has a table with columns for the days of the week (Mon, Tue, Wed, Thu, Fri, Sat, Sun) and rows for the dates. The calendar view shows the dates for the selected month (October) and the dates for the other months (September and November). Below the calendar view is a section titled 'Create Event' which contains a button. At the bottom are navigation icons for Home, Docs, Events, Home, Docs, and Events.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
31	30	1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30	31	1	2

Calendar events:

- Annual Day Celebrations
Avenue Rd
09:00 PM - 10:30 PM
- Brazil Vs France
Avenue Rd
09:00 PM - 10:30 PM

Mockups

Pretty much same as before but removed the events preview section now the user can go to events from home page itself as the docs and events are separated now and alternatively added recently opened files

Before usability study

After usability study

Accessibility considerations

1

Simple navigation and clearly labeled sections were used to help users easily move through the app without confusion.

2

Categorized document sections and schedule previews were included to reduce cognitive load and improve information accessibility.

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

The Fam Manager design helped users feel more organized by bringing family documents and schedules into one place. One participant mentioned that the schedule feature felt simple and easy to use for managing daily activities.

What I learned:

Through this project, I learned the importance of how sticker sheet and small navigation issues can greatly affect the user experience. I also understood the value of organizing information clearly and designing features based on real user feedback

Next steps

1

Maintain the sticker sheet properly to maintain better design consistency across the application.

2

Learn and implement reusable components to create a more scalable and efficient design system.

3

Make interactive elements fully functional, such as dropdown menus and navigation flows, to improve usability and create a more realistic user experience.

Let's connect!

Thank you for reviewing my Fam Manager case study. Feel free to reach out to me for collaborations, feedback, or to view more of my design work .
