

Life Link

Shreepaada M C

Project overview

The product:

LifeLink is a mobile application designed to connect blood donors, recipients, hospitals, and blood banks in a faster and more organized way. The platform helps users find nearby blood requests, locate blood banks, respond to urgent donation needs.

Project duration:

June 2025

Project overview

The problem:

Finding blood during emergencies is often a stressful and time-consuming process. Patients and their families rely on personal contacts, social media, or multiple hospital visits, which can delay access to life-saving blood donations.

The goal:

To create a platform that connects blood donors, recipients, hospitals, and blood banks in one place.

Improve response times during emergencies, and increase donor participation through an accessible and user-friendly experience.

Project overview

My role:

UX/UI Designer

Responsibilities:

Responsible for conducting user research, identifying user needs and pain points, creating user flows and wireframes, designing high-fidelity mobile interfaces, developing interactive prototypes in Figma.

Understanding the user

- User research
- Personas
- Problem statements
- User journey maps

User research: summary

I conducted informal interviews with a few friends who had experience either donating blood or searching for blood during emergencies. Through these conversations, I learned that people often face difficulties finding donors quickly, verifying information, and identifying nearby blood banks.

User research: pain points

1

Difficulty Finding Donors Quickly

Users often struggle to find compatible blood donors during emergencies and spend valuable time contacting multiple people

2

Lack of Verified Information

Many users rely on social media posts and forwarded messages, making it difficult to verify donor availability and request authenticity

3

Limited Awareness of Nearby Blood Banks

Write one to two sentences reflecting on the pain point listed above and how it will guide designs moving forward.

4

Complex Donation Process

Potential donors were unsure about eligibility requirements and the steps involved in donating blood. To address this.

Persona: **Person 1**

Problem statement:

a 25-year-old working professional who wants to donate blood and help people in need but struggles to find verified donation opportunities and reliable information about where and when his donation is needed.

Person 1

Age: 25
Education: MBA
Hometown: Bengaluru
Family: Lives with parents
Occupation: Manager Position

"I want to donate blood regularly, but I don't always know where my donation can make the biggest impact."

Goals

- Help people through blood donation.
- Find verified blood requests quickly.

Frustrations

- Difficulty finding genuine blood requests.
- Uncertainty about donation eligibility.

wants to contribute to society through regular blood donations. He has donated before but often relies on social media or word of mouth to find donation opportunities. He needs a reliable platform that connects him with verified requests, nearby blood banks, and clear donation information so he can help others more effectively.

User journey map

blood donor responding to
an urgent blood request.

Persona: Person 1

Goal: Find and respond to a verified blood donation request to help a patient in need.

ACTION	Navigate to the Requests page	Open a specific blood request	Review donation requirements	Submit donation confirmation
TASK LIST	Tasks A. Browse requests B. Check urgency level C. Select a request	Tasks A. Review patient details B. Check hospital information C. Verify blood group needed	Tasks A. Check donation eligibility B. Review requirements C. Ensure availability	Tasks A. Confirm contact details B. Submit response C. Wait for confirmation
FEELING ADJECTIVE	- Concerned - Interested	- Empathetic - Attentive	- Hopeful - Confident	- Determined - Helpful
IMPROVEMENT OPPORTUNITIES	Provide better filtering and search options	Felt simple and easy	Felt simple and easy	Reduce steps required to confirm donation

Paper wireframes

My goal was to create a simple and intuitive experience that helps users quickly find or donate blood during emergencies.

Digital wireframes

The digital wireframes were designed to help users quickly find blood requests and respond during emergencies.

Search and filter functionality allows users to quickly find nearby blood requests,

Request cards display essential information such as blood type, hospital, urgency level, and location, enabling users to make informed decisions and respond quickly through the Donate Now button

Digital wireframes

This wireframe focuses on helping users quickly evaluate a blood request and determine whether they can donate.

The request summary card highlights critical details such as blood type, hospital name, urgency level, and units needed

9:41

Life Link

A+ City hospital Singapore 2 Units

I Can Donate

Home Requests Blood Banks Profile

The request details section provides additional context about the patient's situation, helping users better understand the urgency and importance of their donation

Digital wireframes

The layout reduces uncertainty by clearly displaying donation information before users commit to helping.

The request summary and patient information sections provide essential details such as blood type, hospital, urgency level, and patient requirements

The wireframe shows a mobile app interface for 'Life Link'. At the top, the status bar shows 9:41, signal strength, and battery. Below is a navigation bar with a back arrow and the 'Life Link' logo. The main content area is divided into sections: a request summary card, a patient information card, and a form titled 'About This Request'. The request summary card displays 'A+' blood type, 'City hospital Bangalore', 'Urgent' status, '2 Units Needed', and '2 km away'. The patient information card shows a profile icon, 'Patient Name', 'Age/Gender' (32 Years, Male), 'Medical Condition' (Undergoing Surgery), and 'Required Before' (Today, 6:00 PM). The 'About This Request' section contains input fields for Date, Time, Hospital, Blood Group, and Units. At the bottom is a large 'Confirm Donation' button. A bottom navigation bar includes icons for Home, Requests, Blood Banks, and Profile.

Request Summary	
A+	City hospital Bangalore
Urgent	2 Units Needed
	2 km away

Patient Information	
	Patient Name
	Age/Gender
	32 Years, Male
	Medical Condition
	Undergoing Surgery
	Required Before

Confirm Donation

Home Requests Blood Banks Profile

prominent Confirm Donation button provides a clear and straightforward action to complete the donation process.

Low-fidelity prototype

<https://www.figma.com/proto/ltnneYIYH0fw9xcGHzbH5k/life-link?node-id=25-788&p=f&t=ril4NC9y8B27jGaY-1&scaling=min-zoom&content-scaling=fixed&page-id=25%3A469>

Usability study: findings

Participants were asked to complete key tasks such as finding a **blood request**, **viewing request details**, and **confirming a donation**. The feedback helped identify areas where navigation, information hierarchy, and task completion could be improved.

Round 1 findings

- 1 Users wanted more information before committing to donate.
- 2 Some users were unsure whether they were eligible to donate.

Round 2 findings

- 1 Users found the donation flow easier to understand after eligibility information was added.
- 2 Users were able to complete donation-related tasks more quickly.

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

Mockups

While creating the high-fidelity mockups, I focused on making the app simple, clear, and easy to use during emergency situations. I used a clean layout, clear information hierarchy, and bold action buttons so users could quickly find blood requests

Mockups

Mockups

High-fidelity prototype

<https://www.figma.com/proto/JtnneYIYH0fw9xcGHzbH5k/life-link?node-id=12-258&p=f&t=nl7PT17NzVv5Px5f-1&scaling=min-zoom&content-scaling=fixed&page-id=12%3A72&starting-point-node-id=12%3A232&show-proto-sidebar=1>

Accessibility considerations

1

I used clear headings, color contrast, and consistent spacing to make important information easier to find and understand. This helps users quickly identify urgent blood requests and key actions during emergencies.

2

Buttons and navigation elements were designed with adequate size and spacing to improve usability for users

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

The LifeLink app provides a simple and organized way for users to find blood requests and respond during emergencies. Feedback from users showed that the clear navigation, detailed request information, and streamlined donation process made it easier to understand requests and complete donation-related tasks with confidence.

What I learned:

Improved my Figma skills by creating interactive prototypes and using Smart Animate along with pre-built animations for the donation confirmation flow

Next steps

1

In the next phase, I would conduct usability testing with a larger group of donors and recipients to gather more diverse feedback.

2

I would add features such as real-time notifications, donor eligibility reminders, appointment scheduling, and live blood bank inventory tracking.

Let's connect!

Thank you for reviewing my Life Link case study. Feel free to reach out to me for collaborations, feedback, or to view more of my design work .
